

theCompany

A global leading intelligent data company provides risk management and asset protection software and services to the automotive industry and property insurance marketplace. The company implements digital identity management services, as well as re-underwriting and data analytics solutions for property and casualty insurance industries. They were working with old deployment software that was leading to errors during deployments. Clear Measure supported them in modernizing their Team City and Octopus Deploy pipelines and eliminated errors during deployments.

theChallenge

Technology team experienced failed builds and software releases due to outdated TeamCity, and Octopus Deploy versions and configurations in their environments and wanted guidance in achieving a proper DevOps CI/CD pipeline structure.

theSolution

Clear Measure proposed to modernize the TeamCity and Octopus Deploy build and release tools so the latest features could be utilized and the software could be in a vendor-supported state.

theBenefit

The client is now able to successfully build and release in their environments with little to no errors. Additionally, the client's development team was educated on best practices on how to build and release software with updated tools, so they could successfully move forward with successful deployments to production on their own.
