

Spending More Time on Deployment Than Development?

Continuous Delivery - Keeping Up with the Speed of Your Business

THE SOLUTION FOR

- High testing and deployment costs
- Business initiative delays
- Disruptive defects and regressions
- Deployment failures and downtime
- Poor staff productivity

Your business is moving fast and your software needs to keep up. But new software releases can be a stressful, risky and expensive event. Deployment failures, downtime and the disruptions to staff productivity can result in suboptimal outcomes for the business. You need a modern automation process that can unlock efficiencies, reduce defects, allow scalability and reduce risk.

Continuous Delivery is an approach that automates the movement of software features and changes through various stages of validation and ultimately to the production environment. Continuous Delivery using the Clear Measure approach makes automated deployments a nonevent - and provides stability to your existing software systems. By establishing a consistent and automated release process, you reduce your testing and deployment costs, business delays and disruptive software bugs. The results of this are easy and

reliable deployments and a surge of productivity so your team can keep up with the needs of the business.

As one of the principles behind the Agile Manifesto, Continuous Delivery has changed how teams develop, deploy and run software. Continuous Delivery is a critical automation practice under the DevOps umbrella. It allows a constant flow of code change through test and validation environments so that what is released to production meets the business needs without disruption.

Clear Measure's Continuous Delivery service helps automate the build and deployment processes of current systems to make them more reliable and reproducible so anyone on your team can build and deploy the software. Clear Measure experts build out a Continuous Delivery pipeline using your existing data center or cloud provider. Our rigorous automated test suites ensure that every software change is a solid step forward rather than an accidental step backward.

BENEFIT FROM A RELIABLE, REPEATABLE PROCESS

- Design deployment pipeline & release process
- Establish reliable test automation
- Integrate deployment automation across environments
- Train and equip client staff with knowledge and documentation

Eliminate the pain of software deployment. Call Clear Measure today!

Leverage the Experts in Continuous Delivery and Modern DevOps Practices

- Gain mastery of large, complex and zero downtime environments
- Accelerate time to market and help eliminate delays
- Unlock greater productivity and team scalability
- Slash testing and deployment costs
- Cut defects and reduce failure rates
